

NFT 288 Home and Classroom Bundle

Description

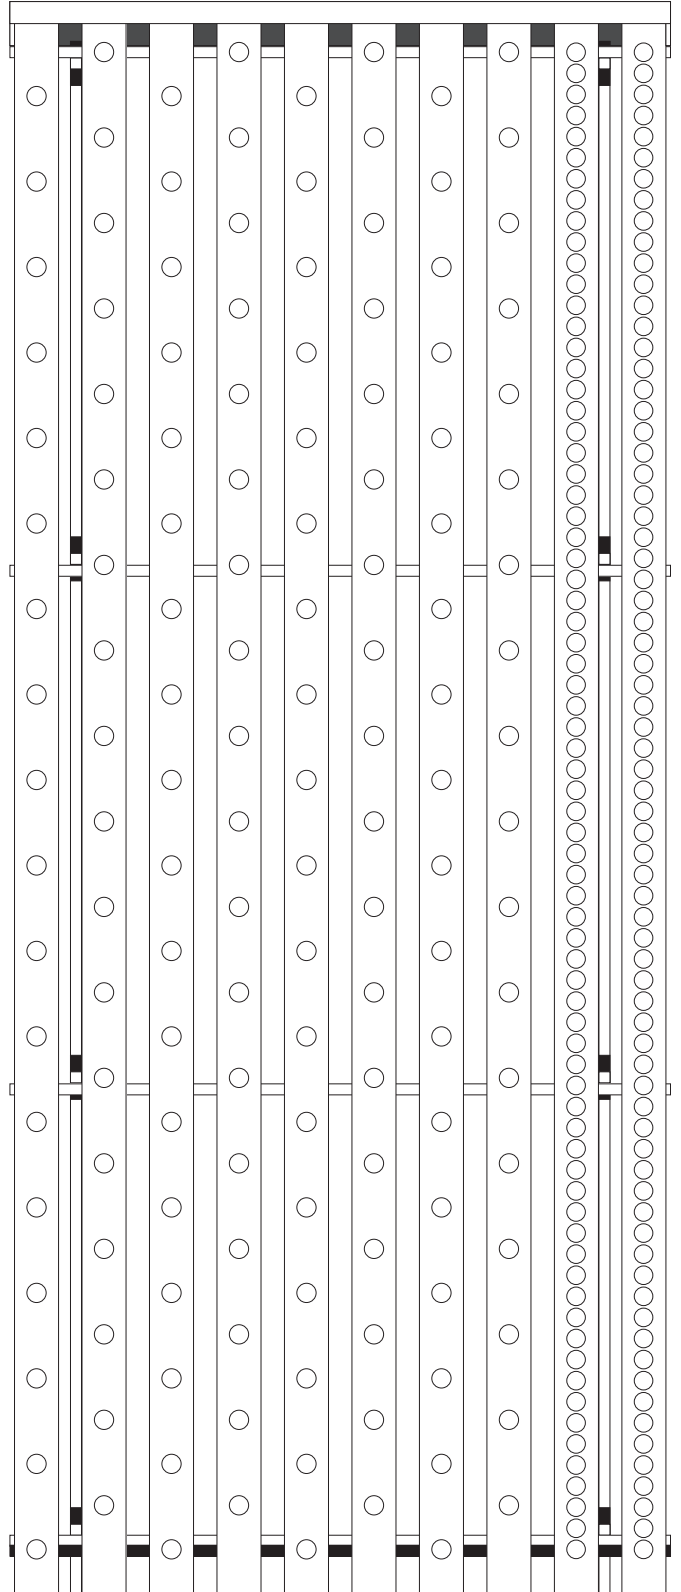

If you aspire to start a small growing operation, we have designed the NFT 288 Herb & Lettuce System as a beginning package especially for you to get hands-on experience. The NFT 288 is a very well thought out, easy to assemble and operate system, and includes virtually everything you need to get started. In weeks, the system will be up to full speed, producing some of the best crops you and your customers will have ever seen.

The NFT 288 System measures 5-ft wide x 12-ft long x 3-ft tall and includes everything you need to start growing.

Features

- All components have been constructed or chosen to enhance their efficiency, energy usage, water usage, and longevity.
- The GroClean NFT channels help conserve natural resources and reduce carbon dioxide emissions with their construction of FDA approved HDPE plastic.
- The NFT 288 System allows you to acquire hands-on experience with hydroponics by actually growing in the system.
- Take your produce to potential markets, put it in their hands and give them the taste test. In this way, they will know you're serious. This will give you a solid indication of how much they'll be able to buy from you so you will know how large an operation with which to begin.
- As an herb/lettuce system, it is capable of growing 72 heads of lettuce or basil bunches per week.
